

Product Features Sheet for **PERSEUS Concentrate**

**What is it?** A unique patented formulation of peracetic acid for udder hygiene, exactly like ready-to-use **PERSEUS** but **concentrated** to save transporting water and reduce packaging.

**How is it used?** Pour 24 Litres of **PERSEUS Concentrate** into a clean, dedicated two hundred litre container (preferably a ready-to-use Perseus drum) and half fill with potable water. Add a second 24 Litres and the 5L Pack of PERSEUS Activator, then fill to 200 Litres as precisely as possible.

An immediate colour change from blue to green indicates that the **PERSEUS** is ready to use. Apply pre and post by spray or immersion. Follow with a cheap dry wipe before milking.

Use to spray or dip clusters without rinsing. No risk to the teats or milk.

**What does it do?**

Cleans, instantly kills micro organisms and conditions with 12% glycerine in the final solution. No residues, taint or the formation of trihalomethane DBPs (disinfectant by-products) which derive from iodine and chlorine.

PERSEUS is effective against all the spoilage and infectious organisms encountered in the dairy and is totally food safe.

Who needs a sticky 'barrier' to pick up chaff and dirt when you can achieve this level of control?

**Do's-** Dilute **PERSEUS Concentrate** accurately. Apply with attention to coverage but minimal run-off.

**Don'ts-** DO NOT mix with other products or apply sequentially with other products. Do not return product to the can or contaminate the can.

**Pack sizes?** 24 Litres
